

# Commodore PET 2001-8 Assembly 320008 Board

## PET 2001 (1977 motherboard) Assembly #320008

- PIA#1 controls Cassette I/O, Cassette/Tape #1
- PIA#2 is use ONLY for the IEEE port.
- 6522 is used for the User port and the Cassette/Tape #2
- The EDIT ROM is used for the Keyboard matrix and some other model specific differences.
- On the 2001-8 Video section of the board is all hard coded.
- On later PETs with the CRTc, the EDIT does the CRTc initialization for 40/80 columns etc. and it also run the startup chime.

MOS ROM is 6540. 6550 is RAM. (Character ROM A2)

H4 and H7 are linked and can be replaced by a single 4K ROM in H4  
H1/H5 and H2/H6 are similarly linked so that a single 4K ROM can replace two 2K ROMs.  
These 4K ROMs weren't available until Basic Level 3

## IC Description and Model

- CPU - 6502
- PIA#1 - 6520
- PIA#2 - 6520
- VIDEO RAM - 6550
- User Port - 6522
- SYSTEM RAM- 6550
- SYSTEM ROM- 6540 (H1-H7)
- CHAR ROM - 6550 A2]

## ROM 2.0 - Basic Level II - 28 pin ROM type 6540 - Series 2001

Location	ROM #	Part Number
H1	6540-019	901439-09 BASIC
H2	6540-013	901439-02 BASIC
H3	6540-015	901439-03 EDIT ROM
H4	6540-016	901439-04 KERNAL
H5	6540-012	901439-05 BASIC
H6	6540-014	901439-06 BASIC
H7	6540-018	901439-08 KERNAL
A2	6540-010	901439-01 Character ROM

Power connection of  
PET 4016

Connection from 4016  
PET power supply to  
2001-8 PET

**\*\*Note\*\***  
These 2 pins are **NOT**  
connected!

## 6522 VERSATILE INTERFACE ADAPTER

### DESCRIPTION

The 6522 Versatile Interface Adapter (VIA) provides all of the capability of the 6520. In addition, this device contains a pair of very powerful interval timers, a serial-to-parallel/parallel-to-serial shift register and input data latching on the peripheral ports. Expanded handshaking capability allows control of bi-directional data transfers between VIA's in multiple processor systems.

Control of peripheral devices is handled primarily through two 8-bit bi-directional ports. Each of these lines can be programmed to act as either an input or an output. Also, several peripheral I/O lines can be controlled directly from the interval timers for generating programmable-frequency square waves and for counting externally generated pulses. To facilitate control of the many powerful features of this chip, the internal registers have been organized into an interrupt flag register, an interrupt enable register and a pair of function control registers.

### FEATURES

- Very powerful expansion of basic 6520 capability.
- N channel, depletion load technology, single +5V supply.
- Completely static and TTL compatible.
- CMOS compatible peripheral control lines.
- Expanded "handshake" capability allows very positive control of data transfers between processor and peripheral devices.

## 6520 PERIPHERAL ADAPTER

### DESCRIPTION

The 6520 Peripheral Adapter is designed to solve a broad range of peripheral control problems in the implementation of microcomputer systems. This device allows a very effective trade-off between software and hardware by providing significant capability and flexibility in a low cost chip. When coupled with the power and speed of the 6500 family of microprocessors, the 6520 allows implementation of very complex systems at a minimum overall cost.

Control of peripheral devices is handled primarily through two 8-bit bi-directional ports. Each of these lines can be programmed to act as either an input or an output. In addition, four peripheral control/interrupt input lines are provided. These lines can be used to interrupt the processor or for "hand-shaking" data between the processor and a peripheral device.

### FEATURES

- High performance replacement for Motorola/AMI /MOSTEK/Hitachi peripheral adapter.
- N channel, depletion load technology, single +5V supply.
- Completely Static and TTL compatible.
- CMOS compatible peripheral control lines.
- Fully automatic "hand-shake" allows very positive control of data transfers between processor and peripheral devices.
